--- -. / - .. -- . / -....- / -... .- -.-... / .- .- .- ... / ...- .- .- ... -... -- .- -. .

First.

- Knowledge is learning **in** time, from sequences of observations.
 - Wisdom is learning **from** time, from sequences of observed sequences, learning from time as it passes. These are observations of observed observations: modes, postures, and transmissible heuristics related to metacognitive stances.
- This can be projected and disseminated in many styles: Synergetic, Fristonian, Blakean, sub-cultural.

Second.

The first insight has a counterpose or corollary, that:

- Knowledge is learning **from** time, from time as it passes, learning causal consequences, patterns and tendencies.
- Wisdom is learning **in** time, the interiority of the first person perspective in-time, and also learning “in due time”, learning “to know when”.

Third.

Together then we have this unitary tetralemma — four quadrants or compass directions, where Knowledge AND Wisdom can be In AND From Time (itself like a flow on Z or imaginary axis).

Taken as One that (relational experience of that) Tetralemma — is Of and In time (like a slice in time).

That tetrahedra tetralemmal handling, reflected exoterically in propositional conveyance like “4=1”, enables a generic perspective swap between unity (Blake’s Albion, or Innocence) and plurality (Blake’s mythical fragments, or Experience) — between being Out of, and In, time.

Swapping as we do, are we always, or never, on time?

Fourth.

Time is my teacher, here on this time-spaceship.

And in that, all Tet’s aside, I am here for Eldership — that it is/be, that those today be recognized and enabled as such, that we might too be as such, so that all’s ought may be it’s is.
